

MEDIWATCH

WHAT IS CLAIMED IS:

1. An alarm watch combination pillbox with simplistic means of operation; of a circular shape with interchangeable multiple compartment divisions for storing/carrying at least one day's medications (pills) comprising of:

a circular shaped big-faced with date window, four separate alarm settings with small watch faces within the main watch face, battery operated analog watch device with multiple alarm function buttons on the underside of the watch face (lid) (four in all programmable for an alarm reminder indicating that it is time to take your medication

a housing have a top wall , an opening in said wall, which accepts removable multi-divisional compartment inserts, and being accessible through said opening in said top wall

a covered member being hingedly attached to said housing for release and securely closing over compartments of said housing, said housing further having means to attach to said chains or straps

a top covered member including a timepiece having a clock face with four smaller clock faces within the main clock face (for better comprehension, please refer to illustration sheet, page 1 figure 1), each clock face being independent of the other

a top covered member, housing the four alarm setting buttons on the underside of said covered member,

a top covered member housing the battery compartment on the underside of said covered member

a top covered member housing the clock setting button on the underside of said covered member

a second covered member which houses the medication list sticker disc and emergency contact information, encircled in a ring which is hingedly attached to said housing (please refer to illustration sheet 1 figures 3 and 5)

a pill storage and reminder watch device as described above in claim 1, wherein said means for locking, releasing said top cover member includes a stub shaft being securely disposed in and extending from said bottom wall of said cover member near a perimeter thereof and also includes a bore extending through said top wall of said housing adapted to receive said stub shaft being closed upon said housing and further includes a shaft ejecting member disposed inside bore of said housing and being biasedly-disposed toward a top of said housing and further includes a shaft release member depressibly disposed in a side wall of said housing and being abutable against said shaft member for moving said shaft retaining member

a chain assembly mounted by brackets on said housing for securing said device around the neck of the wearer

a chain assembly mounted by brackets on said housing for securing said device to chain for carrying in pocket

a strap assembly mounted on said housing for securing said housing to the wrist of the wearer

control circuitry being adapted to the alarms independently of each other allowing each alarm to be programmed in one of four modes, talking, ringing, buzzing or vibrating (silent).

this analog alarm watch mechanism which is battery operated with the battery being located in the underside of the watch face (lid).

this analog alarm watch mechanism, measuring approximately 2 inches in diameter, being hinged on one side, opening and closing with a safety security clasp.

2. A medication identification list disc, which is hingedly attached to said housing, comprising of: (please refer to illustration sheet page 1 figure 2)

a plastic disc located between the lid and the pill compartment, surrounded by a metal ring which is used for adhering the contact information on the top side and medication information on the underside.

a second covered member as describe in claim 1, being hindedly attached to said housing

a removable, paper low adhesive sticker lined and sectioned for hand printing or typing the names of the medications stored in the base section, which can easily be “peeled out “ for change or replacement.

a removable medication list sticker disc, which has numbered sections to coincide with the numbered compartments in the base , not connected to any circuitry or mechanisms , but simply placed on the underside portion of the watch face.

the back side of the removable paper sticker disc which is blank allowing patient to fill in information comprising of, but not limited to emergency and physician contact numbers, abbreviations “LW” indicating Living Will, “MD”, indicating Medical Directive, and “OD” indicating Organ Donor.

3. an alarm watch storage (pillbox) carrying device comprised of :

a base, which is a carrying/storing device for pills, having removable, interchangeable compartment divided inserts, not permanently attached to the inside of the base/pillbox, with each divisional insert being different from the other

a first dividing wall for dividing insert offering two compartments, said dividing wall has a first end and a second end each being fixedly coupled to said internal surface of insert peripheral wall, said first dividing wall generally extending along a line bisecting said insert

a second and third dividing wall for dividing said insert housing into three compartments.

a second dividing wall for dividing said insert, said second dividing wall has a first end and a second end each being fixedly coupled to said internal surface of said peripheral wall generally extending along a line bisecting said insert, said first dividing wall being orientated generally perpendicular

to said second dividing wall, wherein said first and second dividing walls define four compartments

each divisional divider insert being separate and apart from any other insert, with each section/compartiment being numbered to coincide with the alarm setting and to coincide with the medication list disc sections

each compartment insert snapping into said housing and being removable and changeable

plastic shield (lid) with a rotating opening to allow access to a specific compartment, being attached to a compartment divider insert.

wherein said covered portion has a size adapted to fit over said insert

a base having a safety clasp which lines up with the clasp on the watch portion and locks the device securely.

a base having an inside depth of 5/8 inch and 2 inches in diameter.
(approximate)

a base of said housing having the outer bottom having a smooth surface for **engraving** with pertinent **permanent medical information**, such as but not limited to the wearer's name, blood type, medical conditions, drug allergies, implant information, other life threatening information, that if not available to first responders, could be fatal, such as an allergy to Latex, specific medication alert such as a steroid or a blood thinner, that in the event this information was not known could place the wearer in a life threatening situation, when emergency medical treatment or surgery is necessary,

an area for engraving that measures approximately 48 mm in diameter.

a base/pillbox watch combination with multiple alarm settings and a pluerity of interchangeable compartment divider inserts that as in claim 1 is attached to a strap or chain, to be worn on the wrist, around the neck (neck watch) or carried in a pocket (pocket watch), or attached to a hip clip that can be hooked onto a belt or anything of a similar nature.
